

# Nintex® Live

## Unlock The Power of Social in Your Processes with Yammer & Nintex Live

Your organization has a lot of processes – some structured, some not so structured – but all of them very important in getting work done.

Your organization also has Yammer, which empowers your employees to share ideas, get questions answered quickly and facilitate some of those unstructured processes. Nintex adds sophistication and accountability to your unstructured processes. With Nintex Live, you can now harness the collaborative power of Yammer in your Nintex Workflows to:

- Streamline account provisioning
- Simplify help desk requests, and
- Automate distribution of business critical information

## STREAMLINE ACCOUNT PROVISIONING

Employee onboarding is a structured process in most organizations, and you may have automated your onboarding already with SharePoint and Nintex Workflow.

Nintex Live allows you to extend your employee provisioning processes by adding cloud-services, like Yammer, so that you can accomplish more in a single workflow.

Similarly, when employees leave, you can decommission accounts with Nintex Workflow and Nintex Live, streamlining processes further and reducing organization risk.

## SIMPLIFY HELP DESK REQUESTS

Help IT help users by simplifying traditional trouble-shooting processes with Yammer, SharePoint, Nintex Workflow and Nintex Live.

For instance, users can initiate help desk ticketing by posting a message in Yammer to the IT Help Group. Nintex Live can then scan Yammer for key words to kick-off help desk workflows, and IT can respond to the user's post in Yammer when the issue has been resolved.

## AUTOMATE DISTRIBUTION OF BUSINESS CRITICAL INFORMATION

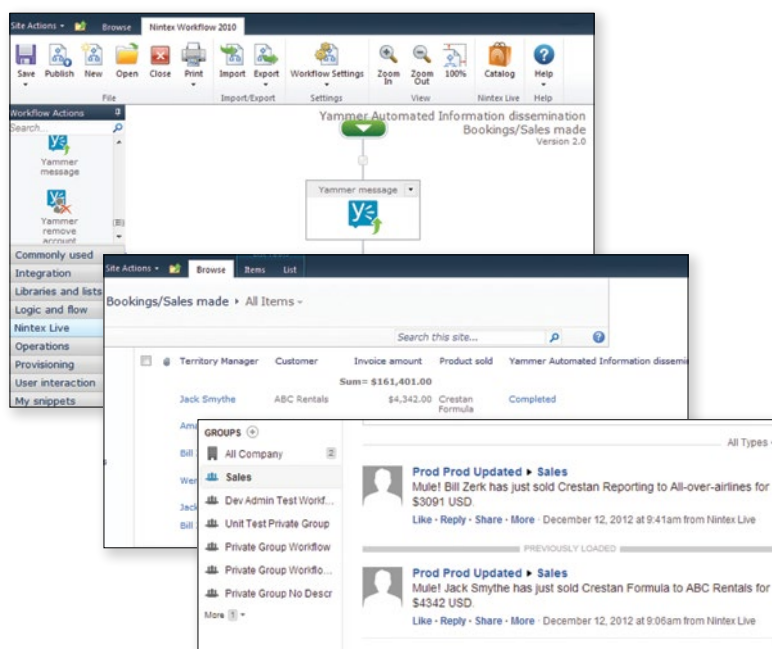

Knowledge workers oversubscribe to information sources for fear of missing something important, but this often results in an overflowing inbox.

One of the big benefits of social networking is the ability to filter information. With Yammer and Nintex Live, you can take this further by enabling the automated distribution of communications to the right people at the right time. For instance, your fulfillment team can receive information about a new booking in real-time through a workflow with Yammer.
